DETAILED ACTION

1. Acknowledgment is made of Request for Continued Examination filed February 17, 2006.

Information Disclosure Statement

2. Acknowledgment is made of Information Disclosure Statements filed February 17, 2006, March 17, 2006, April 18, 2006, April 21, 2006, May 12, 2006, May 19, 2006 and June 22, 2006, which have been considered by the Examiner.

Allowable Subject Matter

3. Claims 15-16, 26, and 97-102 are allowed.
4. The following is an examiner's statement of reasons for allowance:

The record of prior art fails to teach a method of distributing a plurality of products from a cabinet having a door, the method comprising: fitting each product with a radio frequency identification tag; positioning the plurality of products in the cabinet; sensing opening and closing of the cabinet door; scanning the plurality of products in the cabinet upon sensing closing of the cabinet door to determine the number and type of products in the cabinet; generating a message based on the number and type of products in the cabinet; transmitting the message to a server; maintaining an inventory in the server based on the message; reading a code on a user badge; acknowledging having read the user badge; determining the authenticity of the code read from the user badge; opening the cabinet if the code read from the user badge is authentic; and performing a self-updating boot up procedure for a controller associated with the cabinet, the procedure comprising: (a) sending a message querying a most recent software version number; (b) comparing a software version number currently used to the most recent software version

number; (c) downloading software having the most recent software version number if the currently used software version number and the most recent software version number differ when compared; (d) writing the downloaded software to memory associated with the controller; and (e) booting the downloaded software by the controller.

Although, de Prins teaches a method of distributing a plurality of products from a lock cabinet having a door, the method comprising: positioning the plurality of products cabinet; sensing opening and closing of the cabinet door; scanning the plurality of products in the cabinet upon sensing closing of the cabinet door to determine the number and type of products in the cabinet; generating a message based on the number and type of products in the cabinet; transmitting the message/data to a server; and maintaining a inventory in the server based on the message. However, de Prins fails to teach or fairly suggest the steps of each product is fitted with a radio frequency identification tag; reading a code on a user badge; acknowledging having read the user badge; determining the authenticity of the code read from the user badge; and opening the cabinet if the code read from the user badge is authentic, wherein the server uses a self-updating boot up procedure, the procedure comprising: (a) receiving a message containing a most recent software version number; (b) comparing a software version number currently used to the most recent software version number; (c) downloading the most recent software version if versions differ when compared; (d) writing the downloaded software to memory; and (e) booting the downloaded software.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue

fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
